Geza Kovacs

I am the head of Human-Computer Interaction research at Lilt, using Data Science, Machine Learning, and Interactive Machine Translation to boost translator productivity. During my Ph.D at Stanford, I built HabitLab, an app for data-driven behavior change with 12,000+ daily active users. I have published first-author papers in venues including CHI, CSCW, and Learning@Scale, and have reviewed, served on committees, and given invited talks at WMT, EACL, AMTA, CHI, UIST, CSCW, and IMWUT. I have been awarded the NSF and NDSEG Fellowships, and a Stanford Human-Centered AI Grant. I wrote and maintain UNetbootin, an open-source project with 40 million downloads.

Developed metrics and logging to determine how translators spend their time and predict translator performance.
Ran A/B tests to evaluate website translation ROI, and developed system that recommends pages to translate.

Research Intern   Microsoft Research   Redmond   Summer 2015
Designed and built an educational social feed app usable by pre-literate children. Published at CSCW 2017.

Research Intern   Microsoft Research   Beijing   Summer 2014
Built QuizCram, a quiz-driven MOOC lecture viewer that improves learning outcomes. Presented at CHI 2015.

Software Engineering Intern   Google   Mountain View   Summer 2013
Developed a machine learning system for detecting taps on the phone bezel, for use in Android input methods.

Software Engineering Intern   Google   Mountain View   Summer 2012
Developed an NLP system to automatically generate glossaries from book text. Patent granted US9483460B2.

Software Engineering Intern   Google   Mountain View   Summer 2011
Developed a machine learning system to predict the quality of user reviews, now deployed on Google Play.

Software Development Engineer Intern   Microsoft   Redmond   Summer 2010
Built the IntelliSense code completion system for a scientific computing language, and contributed to its compiler.
